

+RULESET+

+THE GRID+

OVERVIEW

The Grid is an intense two-player strategy board game, where players race to be first to get their pieces into the home base using teleports, blocking tactics and pure logic.

OBJECTIVE

Be the first player to get five of your pieces into your home base.

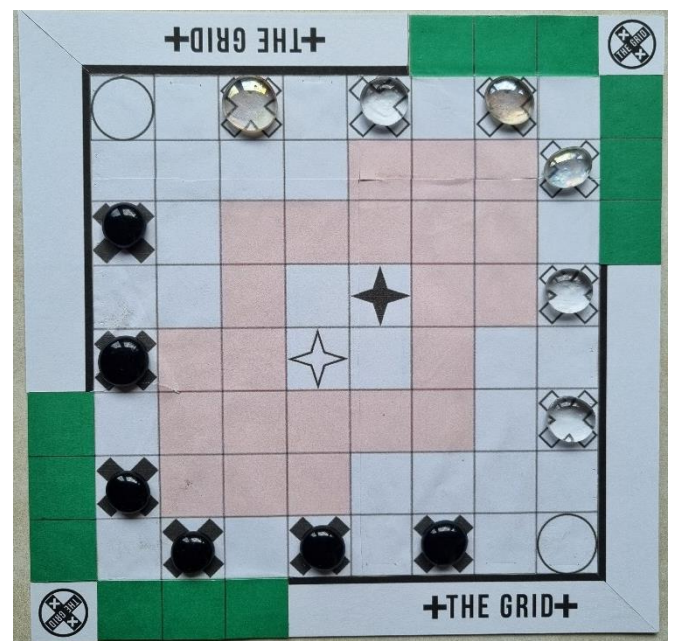

COMPONENTS

- 1 x *The Grid* playing board
- 6 x white pieces
- 6 x black pieces
- 3 x red wall tokens

GAME SETUP

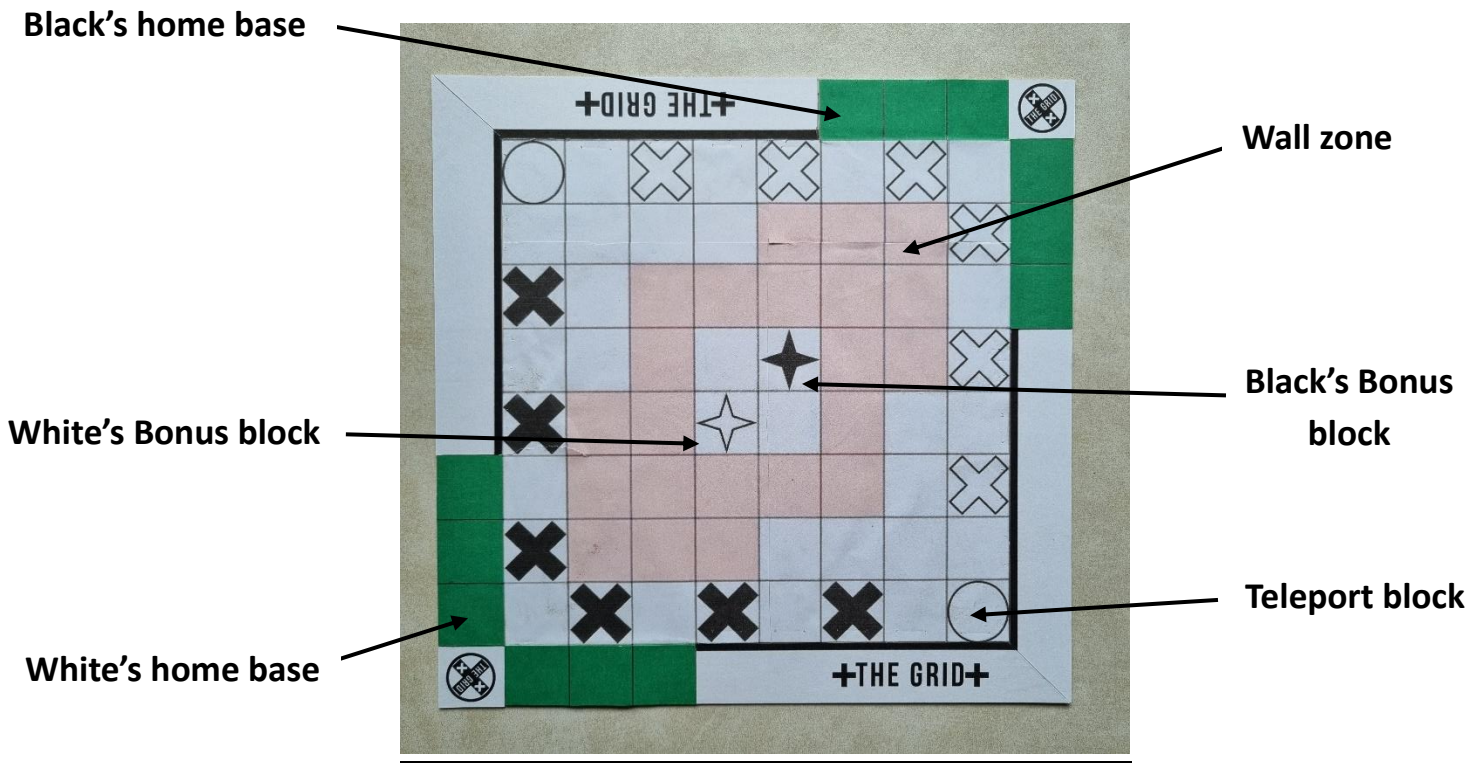

Choose a colour. (Black starts the game.)

Place a piece on each X on the board, with white pieces on white crosses, and black pieces on black crosses.

Example of setup

RULES

The playing board

THE OPENING MOVE

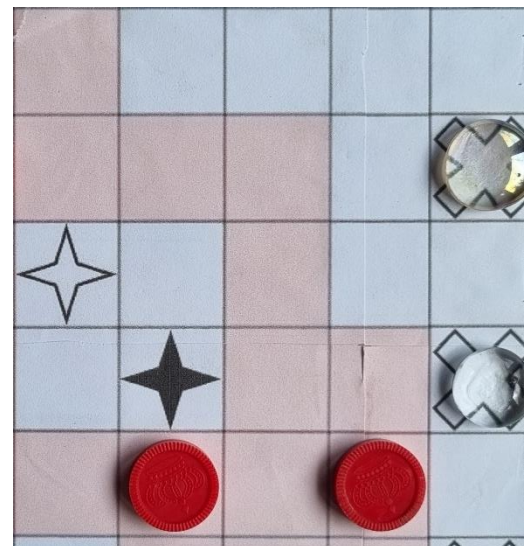

The objective of *The Grid* is to get five of your coloured pieces to your home base (green blocks) on the opposite side of the board.

The first move of the game is to each place one of the three supplied walls anywhere in the wall zone (pink blocks) to disadvantage your opponent's advance on their home base.

Black goes first, placing the first wall, followed by white, who places the second wall.

Be careful though: walls you place also impact your movement!

Once you have both placed a wall, you can start moving pieces from the next turn.

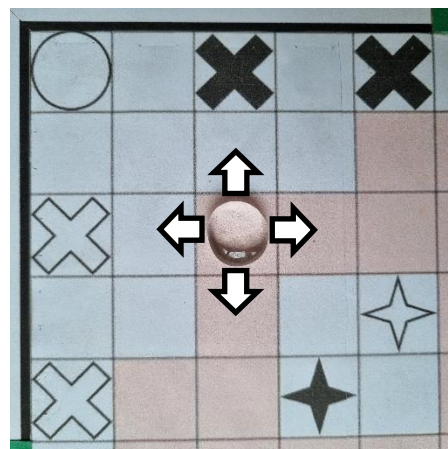

Example of the walls placed

MOVING PIECES

Take turns moving your pieces one block at a time.

You can move in any direction, except diagonally.

Once you have moved a piece, you can only reverse that move after you have played another turn.

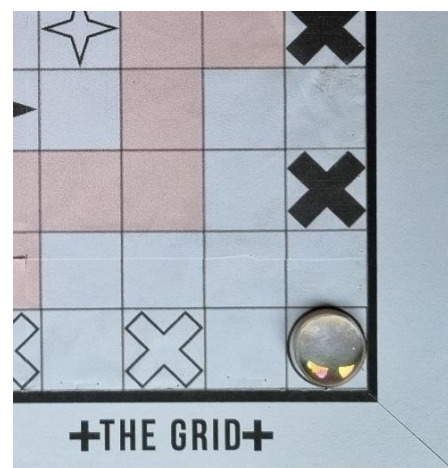

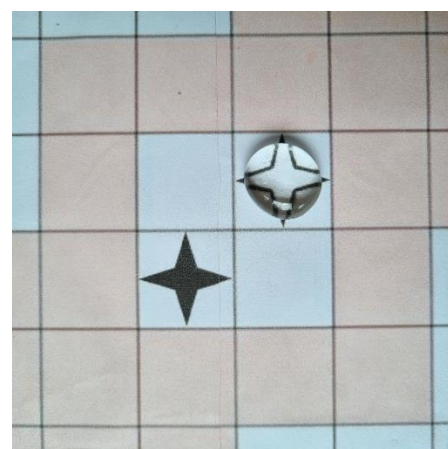

LANDING ON THE BONUS BLOCKS

In the middle of the board are two bonus blocks.

When you land on your own bonus block (the same colour as your pieces), you must move that piece directly to either of the two teleporter blocks (marked with a circle).

As part of your turn, immediately after teleporting this piece, move any of your pieces three blocks in any direction. You can change direction during your three-space move, but may not move diagonally.

- You may **NOT** at any point, land on or cross over your opponent's bonus block.
- You are allowed to block one or both of the teleporters if this suits your strategy.
- You are allowed to move onto a teleporter block through a normal, one-space move.

IF BOTH TELEPORTER BLOCKS ARE OCCUPIED

If both the teleporter blocks have pieces on top of them, then the bonus blocks become regular playing blocks until one of the teleporters opens up.

Example of the teleport

You may still however, not touch your opponent's bonus block, even when both bonus blocks are regular playing blocks.

NB: If there is a piece on a bonus-turned-regular block when one of the teleporters opens up, that block remains a regular block until reactivated.

The bonus block only reactivates once the piece moves off it.

Remember that you cannot reverse a move in your next turn, so you cannot move off the bonus block and back onto it in consecutive moves.

GETTING A PIECE INTO HOME BASE

Once you land a piece in your home base (the green zone on the opposite side of the board to where your pieces started), you can place another wall in the wall zone if you want to.

If all three walls are already placed, you may move an existing wall to a new spot.

The choice to move or place a wall is up to you.

MOVEMENT IN HOME BASE

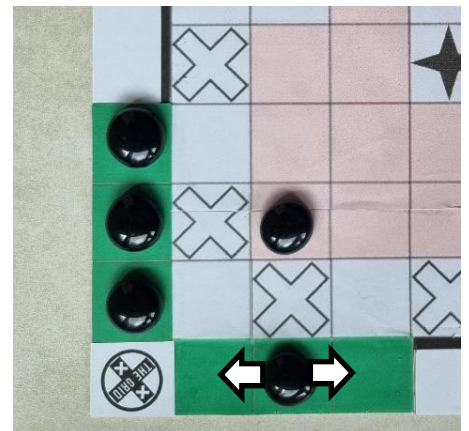

As a rule, where a piece lands in the home base is where it must stay. It cannot be moved, with one exception:

- At any point in the game, you are allowed to shift **ONE** of the pieces already successfully placed into home base by one block.

You can only do this **ONCE**, so make sure to use this one chance wisely!

GAME END

The game ends when you or your opponent gets five of your pieces into home base.
